Specification

The disclosure is objected to because of the following:

The term "boss" is not the proper term to depict element 10 and goes against the typical definition of "boss".

Appropriate correction is required.

Claim Rejections - 35 USC § 112

Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The use of parenthesis renders the associated limitations ambiguous. The term "locatable" is not understood since the elements recited in conjunction therewith are permanently attached to their related portions of the slat. The angles "XX" and "XX" are indefinite. Claim 3 depends from claim 5 (and will be assumed to depend from claim 1). Claim 5 depends from itself (and will be assumed to depend from claim 4). Claim 6 depends from itself (and will be assumed to depend from claim 5). Claim 7 does not have a period. The terms "similar" and "minimized" render claim 3 vague and indefinite. The vertical axis of the slat is ambiguous since the slat is curved and does not inherently define an axis.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3634

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Miller 6,085,822.

See engaging track 96a, etc., receptacle track 96b, etc., and "boss" 102, which is considered to be "in" the broadly recited receptacle track and is between the aperture of defined by 96b and the body of the slat. The angle is met as best understood.

Claims 1-7 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Russell et al.

In Fig. 7, see receptacle track 222 having a "boss", unnumbered, therein, and engaging track 220.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
